For more than fifteen years, GISolve has been deployed within multiple national and international cyberinfrastructure environments and used by numerous users from a broad range of fields (e.g., agriculture, biology, computer science, geography, hydrology, linguistics, public health, and statistics).
- [3] SimpleGrid Toolkit. Co-invented this software for learning and prototyping science and engineering gateways to advanced cyberinfrastructure, co-led the research and development of the software, and taught tutorials for hundreds of users at a variety of prominent conferences and workshops.
- [4] The Open Science Grid Generic Information Provider. Led the research and development of this distributed information system software for cyberinfrastructure resource management through several projects funded by DOE and NSF. For more than ten years, the software was widely deployed and used for distributed scientific computing in the U.S. and multiple other countries, enabling scientists of many fields (e.g., biology, computer science, geospatial sciences, and physics) to tackle data-intensive and computational challenges.

SUPERCOMPUTER

- [5] ROGER (Resourcing Open Geospatial Education and Research). Led a multidisciplinary and multi-institution team to create and operate this first-ever cyberGIS supercomputer supported by an NSF Major Research Instrumentation grant. ROGER is also the first general-purpose supercomputer that seamlessly integrates high-performance computing with

Graphic Processing Units (GPUs), data-intensive computing (based on Hadoop and Spark), and cloud computing (based on OpenStack), supporting researchers and educators to flexibly take advantage of one or multiple of these computing modalities all connected by a fast network and common storage backbone. ROGER has enabled broad and significant scientific advances in multidisciplinary, bio, engineering, geo, and social sciences.

VISUALIZATION

- [6] The Great Flood. Led the CIGI Laboratory to contribute geospatial data retrieval and analysis in a collaboration with NCSA's Advanced Visualization Laboratory to the creation of data-driven visualization of the Mississippi River Valley showing the extent of destructive 1927 floodwaters for the 75-minute multimedia work: "The Great Flood". The work features Grammy Award-winning guitarist and composer Bill Frisell performing original music with accompanying film and staging by Obie-winning experimental filmmaker Bill Morrison. It premiered in September 2011 at the University of Illinois Krannert Center for the Performing Arts.
